

Radhika Dubey - PRODUCT MANAGER

+1 (469) 730-6185| radhikadubeyms@gmail.com | LinkedIn | USA

SUMMARY

Results-driven Product Manager with 5+ years of experience leading product initiatives, business analytics, operational optimization, and cross-functional collaboration across e-commerce, digital platforms, logistics, and enterprise environments. Skilled in driving product strategy and execution by translating business requirements into scalable, data-driven solutions using SQL, Python, Agile methodologies, KPI tracking, workflow automation, A/B testing, and web analytics. Experienced in managing product lifecycle activities including requirement gathering, stakeholder communication, user experience improvements, product quality validation, process optimization, and roadmap support to enhance platform performance, customer engagement, operational efficiency, and business outcomes. Proven ability to collaborate with product, engineering, UX, operations, and business teams to deliver impactful solutions, improve decision-making, streamline workflows, and support scalable product growth in fast-paced environments.

PROFESSIONAL EXPERIENCE

Visa — Senior Product Manager (AI/ML & B2B SaaS Platforms)

June 2024 – Present | USA

- Led product strategy and roadmap execution for enterprise B2B SaaS and digital payments platforms, improving merchant onboarding, checkout workflows, and customer activation experiences while aligning delivery with business and engineering goals using Agile/Scrum methodologies, resulting in a 28% increase in merchant onboarding and activation conversion rates.
- Spearheaded AI/ML-driven product initiatives including intelligent merchant insights, automation workflows, fraud detection support systems, recommendation engines, and personalization capabilities, contributing to a 22% improvement in merchant engagement and retention metrics across enterprise commerce ecosystems.
- Owned end-to-end product discovery, PRDs, user stories, acceptance criteria, and release planning by collaborating with merchants, engineering, UX, analytics, and operations teams to identify and resolve workflow friction points across payment and onboarding systems, reducing onboarding inefficiencies by 35%.
- Leveraged SQL, Python, product analytics platforms, and experimentation frameworks to drive data-backed product decisions through conversion funnel analysis, behavioral analytics, retention tracking, and A/B testing initiatives that optimized merchant activation and payment performance.
- Partnered with engineering and platform architecture teams on APIs, backend services, cloud infrastructure, microservices, and scalable payment systems supporting multi-million daily transaction volumes with 99.9% platform reliability across enterprise payment environments.
- Directed monetization and growth initiatives involving subscription management, pricing experiments, transaction intelligence, and payment optimization strategies while collaborating cross-functionally with cybersecurity, compliance, sales, marketing, and customer support teams to align platform capabilities with business growth objectives.
- Presented AI adoption strategies, KPI dashboards, roadmap updates, experimentation insights, and product performance reviews to executive leadership and stakeholders, enabling faster strategic decision-making and long-term platform scalability planning.

Amazon - Product Manager (E-Commerce Platforms)

Jan 2020 - June 2023 | India

- Led product development and roadmap execution for large-scale e-commerce and enterprise digital platforms, collaborating with backend, frontend, cloud, and data engineering teams to deliver scalable API-driven solutions that enhanced customer shopping experiences and seller operations, contributing to a 24% increase in customer conversion and checkout completion rates.
- Defined product requirements, PRDs, user stories, acceptance criteria, and feature roadmaps for microservices-based applications while partnering with solution architects and engineering teams to ensure high standards of scalability, reliability, security, and performance across enterprise commerce ecosystems.
- Worked closely with engineering teams to design and optimize RESTful APIs, payment integrations, authentication systems (OAuth/JWT), order management workflows, and inventory synchronization capabilities, improving platform response performance by 30% during high-traffic transaction periods.
- Leveraged SQL, Python, analytics dashboards, and customer behavior insights to analyze conversion funnels, cart abandonment trends, feature adoption, and operational workflows, enabling data-driven optimizations that reduced cart abandonment and order processing friction by 20%.
- Drove ROI-focused product initiatives by improving operational efficiency, optimizing checkout and order management workflows, reducing infrastructure overhead, and supporting revenue growth strategies that enhanced overall platform profitability and business performance.
- Partnered with cloud infrastructure and DevOps teams on CI/CD pipelines, release planning, monitoring, and production deployments, ensuring stable enterprise platform rollouts and highly available distributed systems supporting millions of daily customer interactions with 99.9% uptime.
- Acted as the bridge between business stakeholders, operations teams, and engineering organizations by translating complex business requirements into scalable technical product solutions while driving Agile/Scrum execution, sprint planning, backlog prioritization, and multi-quarter roadmap delivery using Jira and Confluence.

TECHNICAL SKILLS

- **Product Management:** Product Strategy, Product Lifecycle Management, Roadmap Planning & Execution, Product Discovery, Requirement Gathering, PRDs, User Stories, Acceptance Criteria, Backlog Prioritization, Feature Prioritization, Go-to-Market Support, Stakeholder Management, Cross-Functional Collaboration, Agile/Scrum Methodologies, Sprint Planning, Product Quality Validation
- **B2B SaaS & Platform Products:** B2B SaaS Platforms, Enterprise Digital Platforms, E-Commerce Platforms, Payment Systems, API-Driven Products, Merchant Platforms, Workflow Automation, Platform Optimization, Scalable Product Solutions, Operational Efficiency, Process Improvement, Monetization Strategies
- **Business & Product Analytics:** SQL, Python, Product Analytics, KPI Tracking, Data Analysis, A/B Testing, Web Analytics, Conversion Funnel Analysis, Behavioral Analytics, Retention Analysis, Reporting & Dashboarding, Business Intelligence, Performance Metrics, Operational Analytics, Data Visualization
- **UX & Customer Experience:** Figma, UX Collaboration, User Experience Optimization, Customer Journey Mapping, Wireframing, Landing Page Optimization, User Behavior Analysis, Feature Adoption Analysis, Usability Improvements
- **Technical & Cloud Exposure:** REST APIs, Microservices Architecture, Cloud Infrastructure, CI/CD Pipelines, Backend Systems Collaboration, Authentication Systems (OAuth/JWT), System Integrations, Release Management, Distributed Systems
- **Tools & Platforms:** Jira, Confluence, ServiceNow, Tableau, Power BI, Google Analytics, Looker Studio, Excel, Jupyter Notebook, Microsoft Office Suite, Google Workspace, Slack, Trello, Asana
- **Core Competencies:** Strategic Thinking, Problem Solving, Analytical Thinking, Stakeholder Communication, Executive Reporting, Decision Making, Cross-Functional Leadership, Process Optimization, Operational Excellence, Team Collaboration, Adaptability, Time Management

EDUCATION

Masters in Information Technology & Management

The University of Texas at Dallas, US

KEY PROJECTS

Marketplace Analytics & Product Operations Optimization | Holiday Channel

- Collaborated with cross-functional teams to support marketplace product operations, workflow validation, KPI tracking, and Agile release activities across customer-facing platforms.
- Defined business requirements, acceptance criteria, reporting structures, and data validation rules to improve reporting accuracy and operational consistency.
- Performed root-cause analysis on workflow gaps, production issues, and reporting discrepancies, helping reduce recurring operational defects and improve issue resolution efficiency.
- Created QA documentation, operational dashboards, metric dictionaries, and process reports to improve stakeholder visibility, release coordination, and team alignment.

Web Analytics & User Engagement Optimization | The University of Texas at Dallas

- Gathered reporting and analytics requirements from Digital Services, UX, and Marketing teams to support website performance analysis and decision-making.
- Developed automated SQL-based validation and anomaly detection workflows to improve data accuracy and reporting reliability across multi-source datasets.
- Analyzed website engagement metrics including CTR, bounce rate, session duration, and scroll depth to identify behavioral trends and optimization opportunities.
- Conducted A/B testing on webpage layouts, CTAs, and banners to evaluate user engagement performance and support UX improvement initiatives.
- Improved SEO-focused webpage structures and monitored analytics trends using web analytics platforms to enhance website effectiveness and traffic insights.

Warehouse Operations & Logistics Process Improvement | Satish Cold Storage

- Analyzed warehouse and logistics workflows to identify operational bottlenecks and recommend TO-BE process improvements for inventory and fulfillment operations.
- Monitored operational KPIs including storage utilization, turnaround time, and order fulfillment metrics to support performance tracking and management reporting.
- Coordinated inventory scheduling, vendor communication, and warehouse operations to improve workflow efficiency and service consistency across storage facilities.
- Generated operational reports and process documentation to support data-driven business decisions and workflow optimization initiatives.

Incident Management & Support Workflow Analytics | Tata Consultancy Services (Client: Kroger)

- Managed and analyzed Jira and ServiceNow tickets related to system defects, integrations, operational issues, and customer-reported incidents.
- Developed ticket categorization and trend analysis reports to identify recurring issues, improve root-cause analysis, and

support operational decision-making.

- Collaborated with engineering and support teams to document incidents, escalation details, reproduction steps, and impact analysis for faster issue resolution.
- Optimized ticket-handling workflows and SLA tracking processes, improving support coordination, issue prioritization, and response efficiency.

COVID-19 Data Visualization & Hypothesis Analysis Project

- Analyzed COVID-19 datasets across New York State and the U.S. to evaluate healthcare, demographic, and vaccination-related trends using statistical analysis techniques.
- Cleaned, standardized, and merged large multi-source datasets containing 250K+ records from public healthcare and census data platforms.
- Conducted hypothesis testing and exploratory data analysis to identify behavioral and regional insights related to hospitalization and vaccination patterns.
- Built data visualizations and analytical reports to present findings and support data-driven interpretation of public health trends.
